

have you met **your match?**

have you met
your match?

Rain, sleet, sun, snow, mud - you name it, if it's destined for the garden then the colour has got to be able to withstand all the elements without fading.

Our clients in this sector particularly value our access to UV stable pigments and the time we take to really understand what their products are subjected to throughout their lifetime to make sure we create the right masterbatch.

have you met
your match?

Colour can also be
highly synonymous with a brand
-think orange lawnmower, think
yellow garden hose.

The colour has to be right to reinforce the message of investing in a quality product, a household name that's been trusted for generations. Whether a product is for heavy duty work (chainsaws, lawn mowers) or something for the kids to dance around in on the hottest days of the year whilst the lawn is watered (sprinklers and hoses), Eclipse has got the right colour and the right technology to colour any outdoor plastic product.

have you met
your match?

Children engage with colour from an early age and Eclipse's safe and stable pigments are suitable for plastic toys and nursery products from day one.

Make plastics beautiful and a true style statement with masterbatch from Eclipse.

PlastiCol™
a match
made in heaven

Eclipse works with plastic manufacturers across Europe to create, produce and supply high quality  **PlastiCol™** masterbatch which reflects exact specifications.

We bring the colour to polymer that can bring a product to life. Offering rapid turnaround, technical advice and support, Eclipse is the partner of choice for many leading brands as well as more niche manufacturers.

PlastiCol™
a match
made in heaven

Eclipse doesn't just match
precisely on colour, we
also match your production
processes.

Our consultancy-led approach to partnering with clients means that we take the time to understand individual manufacturing processes and end product requirements. Colouration or heat related production issues are often eradicated, saving time and saving money to deliver long-term value back to your business.

PlastiCol™

exclusively from
eclipse colours

Eclipse works with plastic product manufacturers across the UK and Europe to deliver masterbatch for containers that protect and preserve foodstuffs without tainting.

Food storage containers are another area of specialism, where customers often wish to develop a colour-coordinated range of containers in various shapes and sizes.

The masterbatch we produce for these clients often contains additives such as antibacterial and antifungal to make sure that food can be packaged and preserved as attractively and hygienically as possible for storage and/or transportation.

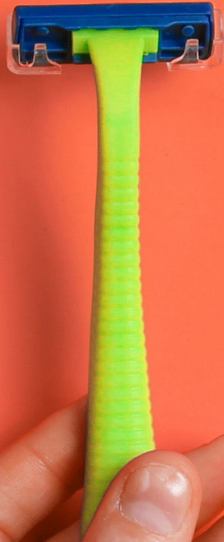

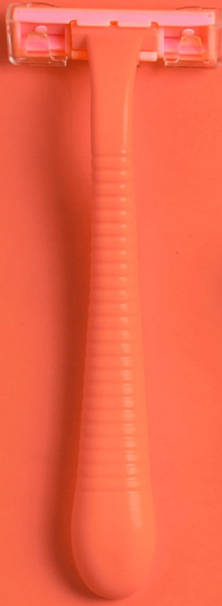

PlastiCol™

exclusively from
eclipse colours

Colours as unique as your product and fit for purpose with PlastiCol. No compromises, we create a masterbatch that's just for you.

We match to RAL, Pantone and British Standard Colours as well as colour swatches or existing products. Many companies can match, but for us a match is only a match if it's a perfect match on colour and end product functionality. Our colour plaques prove just how consistent and true our colours stay over time and over multiple orders - we hold colour plaques for every Eclipse client and it's the benchmark for what we do.

PlastiCol™

exclusively from
eclipse colours

Colour can play an important part in enabling customers to quickly and accurately select a product, as well as being a safety feature to flag up dangerous or hazardous products in an industrial or workshop environment.

We provide colour for all the following types of caps and closures for the food and beverage sectors as well as for chemicals and pharmaceutical containment: Screw caps, tamper evident caps, snap caps, sports caps and closures for cosmetics. Please call us for more advice on any type of closure or cap.

RAL 5002

*"Eclipse are very thorough but yet
I still feel that the service I receive
is truly personal"*

Andy Dearing

Managing Director, Dearing Plastics

PlastiCol™

eclipse colours

Colour plays a major role in safety messaging and robust containment for industrial products.

The plastics we provide colour to ultimately house a huge variety of hazardous and non-hazardous liquids or solids. As well as colour for caps and closures, our masterbatch gives deep and true colour to containers that will withstand aggressive chemicals, external elements and also protect against UV light or bacteria to improve the stability and shelf life of a product. Containers and carriers for paint, petrol and pesticides are amongst some of the plastic products we've provided a robust and fit for purpose colour to. Contact us for specialist advice on the use of colour in any plastic containment product.

If you'd like to find out more about working with Eclipse to create your perfect
 **PlastiCol** masterbatch please call or e-mail and we'll be back in touch very soon.
